March 17, 1987

Mr. David Canosa
J. E. Berger Corporation
5300 Bellevue Avenue
Detroit, Michigan 48211

Dear Mr. Canosa:

I have received the March 12, 1987 letter from Mr. David Bennett of Bennett Engineering, Inc., sent on your behalf. This letter addresses activities necessary to complete cleanup of PCB contaminated areas on and adjacent to your company property and was sent in response to my February 26, 1987 letter to you.

The nature of activities in Mr. Bennett's letter and the order of accomplishing them is generally acceptable. Areas that will require excavation in Lot Nos. 1, 2 and 3 have not been fully defined in the March 12, 1987 blueprints I received. These areas should be specified and shown in a transmittal to the Michigan Department of Natural Resources (MDNR) when the sampling data is due on April 30, 1987. The amount of sampling proposed for completion before April 10, 1987 is acceptable for this stage of the cleanup. Further sampling may be necessary, as always, dependent upon the results of this sampling effort. Dates for sample collection and submittal to the MDNR (April 10 and April 30, 1987, respectively) are acceptable, as is the May 15, 1987 date for beginning actual cleanup activities. These actual cleanup activities are summarized in point nos. 1-6 of Mr. Bennett's letter.

The only date not specified in Mr. Bennett's letter is a completion date for the entire project. DNR staff have evaluated the amount of remaining work to complete the project and have set a July 1, 1987 deadline for completion of all PCB cleanup activities, including all remediation and restoration.
